Hardware: Black, Silver, & White

PERFORMANCE FEATURES & DETAILED SPECIFICATIONS

ENERGY-EFFICIENT GLAZING OPTIONS:

INICIO Windows + Doors provides a range of insulating solutions, including standard dual-pane or optional triple-pane glass, along with advanced surface coatings designed to regulate light and heat flow, enhancing a home's comfort and energy efficiency.

Low E2

A versatile and widely-used Low E coating, Low E2 is designed to perform effectively across various climates and regions. With its dual transparent silver layers, it strikes a balance between reducing solar heat gain and enhancing radiant heating efficiency.

Low E3

Ideal for areas where managing solar heat gain and U-value is essential, Low E3 features triple transparent silver layers that deliver radiant performance similar to Low E2. This coating is particularly suited for sunny, southern climates where keeping interiors cool takes priority over retaining heat.

Advanced Performance Glass

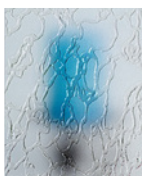

Building on the proven performance of Low E3, our Advanced Performance Glass adds an additional layer of protection, creating our highest-efficiency option for demanding climates and strict energy codes.
